Saccharomyces cerevisiae includes an agglutination gene of 4.7 kb (FLOI), and an agglutination gene of 2.6 kb (FLOIs). FLOIL is the intact FLOI gene on chromosome I, and FLOIS is the FLOIL gene with a portion of the ORF deleted in frame. FLOIL imparts a relatively strong agglutinative property to the host yeast into which it is introduced, while FLOIS imparts a weaker agglutinative property.
                                                                                                                                                                                                      Gaps

The present invention describes colon tumour associated proteins (I) and the present invention describes colon tumour associated proteins (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) can be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TAP) expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by expression or deletions in a patient's genome that affect the patients own production of them. Additionally, (II) may be used to crivity of TCAPs by expressing inactive proteins or to supplement the patients own production of them. Additionally, (II) may be used to complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used or farsociation (PCR) and hybridisation assays to detect and therefore which patients may be in need of restorative therapy. (I) may also be used as an antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies may also be used can an antigen and antagonists may also be used cand in assays to detecting the presence of anti-(I) antibodies and antagonists may also be used cand in an assays to redeeting the presence of TCAPs in samples cand and AMM4494 to AAM4453 represent nucleotide and amino acid sequences and AMM4494 to AAM4453 represent nucleotide and amino acid sequences and antagonists end cand and and antigoriate and an amino acid sequences and antagonists end and amino acid sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Colon tumor associated proteins and nucleic acids useful for the prevention, diagnosis and treatment of colonic cancer -

                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511); expressed DNA sequences (ABL5173-ABR3072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antiblotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichial coll, Staphylococcus aureus, Salmonella typhi, Klebstella pneumoniae, Pseudomonas aeruginosa and Enterococcus facalis. The invention is also useful for the identification of potential new targets

for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antibodies capable of sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of cryanisms. The present sequence represents an essential prokaryotic callular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formed in the published poct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -----VDVPYHTTTTVTSEWTGTITTT----TRINPIDSIDTVVQVPLPNP 436

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from brosophila. The invention useful in developmental belotogy and in elucidating cell signalling and interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmacoutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA (ABB57737-ABB72072).

The sequence for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPPO at ftp.WiPpo.int/pub/published_pct_sequences.
                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more spense from brosophila and for elucidating cell signalling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    182 gtifspverkclpgdqcpstelsdsgsylpgncelkfpecaeegtf----rsptdcaly 236

isolated nucleic acid molecules from Caenorhabditis elegans useful for producing transgenic nematodes with altered mating behavior for identifying genes or regulatory factors involved in polycystic kidney disease.
                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of a deletion allele, termed (see laye) set democrabeditis elegans LOV-1 protein (see AAY95556), generated by genomic deletion of the PKD/channel came had by PCR. LOV-1 is an orthologue of the lov-1 gene by PCR. LOV-1 is an orthologue of the hamman polygystin-1 (PKD1) gene that is affective in human autosomal dominant polygytic kidney disease (PKD). The LOV-1 protein is involved in chemosensory or mechanosensory signal transduction in sensory neurons. It is required for 2 male sensory behaviours, response of males to hermaphrodites, and location of the vulva. Nematodes such as C. elegans that express mutant or wild-type LOV-1 or PKD-2 (see AAY95557) can be used to study the functions of the proteins encoded by these genes, to screen for other genes involved in PKD. to Identifiam utations involved in the disease, and to screen for drugs that affect PKD. Behaviours controlled by the action of the genes or gene products are identified and used in the assays. Hence, an animal model is provided that permits study of the etiology of PKD and provides a tool identify compounds that may be used to treat or alter the disease perman.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   252 YTKTCTSNGIQIKYQNVPAGYRPFIDAYISATDVNQYTLAYINDYTCAGSRLQSKPFTLR 311
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    194 yrekcesgeineeyarrmc-krpyrse--kstaisdsggvyydggvlkgvr--akgfsmr 248

The invention provides mucin genes (MUCI1 and MUCI2) located on human chromosome 7422. The mucin genes or its portion is used in detecting polymorphism, mutation, deletion, truncation and expansion in the gene or its gene transcript. Pharmaceutical compositions and gene therapy constructs comprising the mucin genes are used for treating disease occiditions associated with aberrant Mucin expression, altered properties of mucus or epithelial inflammatory processes involving Mucins ilke colorectal cancer, cystic fibrosis, inflammatory browel disease and cancer. The mucin genes and the polypeptides are used for determining these diseases or theat predsposition. The MUCI1 and MUCI2 polypeptides are used for preparing antagonist and antibodies. The present sequence represents the human MUCI1 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         43
                                                                                                                                                                                                          Novel MUC nucleic acid corresponding to mucin gene, useful for treating associated disease conditions e.g. colorectal, breast cancer, cystic fibrosis and inflammatory bowel disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              597

The present invention describes colon tumour associated proteins (I) and the present invention describes colon tumour associated proteins (I) and (II) can be used in the foreign describe accine production. (I) and (II) can be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TGAP) expression, such as colonic cencer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by captients on production of them. Additionally, (II) may be used to trutaring the cell colonic cencer. For example, (I) and (II) may be activity of TGAP by expressing inactive proteins or to supplement the activity of TGAP by expressing inactive proteins or to supplement the cell culturing the cell to express the protein. (II) and its complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and therefore which patients may be in need of restorative thereby. (I) may the used as antigens in the production of antibodies and antagonists may also be used to down require.

TGAP expression and activity. The anti-(I) antibodies and activity. The anti-(I) antibodies and antagonists may also be used to down require a diagnostic agents for detecting the presence of TGAP expression and activity. The anti-(I) antibodies also be used as an antigen in the presence of TGAP in samples of e.g. by enzyme linked immunosorbant assay (EISA). AA128460 to AAA129512 and AMA4494 to AAA44523 represent nuclectide and amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                43;

                                                               AAW06725 is the FLOI protein derived from a partial gene sequence from Saccharonyces cerevisiae. The gene was named Lg-FLOI. The FLOI protein is believed to be involved in yeast flocculation (aggregation). The DNA and protein are used in a method for determining whether or not a sample yeast has flocculating activity, i.e. to distinguish if a yeast is a flocculating or floating yeast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     tngqptdet-vivvktpttantivtttkpwtgtftststemttvtgtngqptde-tvivi

                                                                                                                                                                                                                                                                                                                                                                                                                                               Valuable compounds are isolated from complex mixtures by use of immobilized ligands composed of an anchoring protein and a binding protein. A sultable anchoring protein is yeast FLO1 (associated with flocculation), and a gene encoding a chimeric scPv-FLO1 protein that will anchor in the cell wall of a lower eukaryote, and which binds HCG with high specificity, was produced.

                                                                                                                                                                                                                                                                                AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatorropic; vulnerary; antiparkinsonian; nociropic; neuroprotective: osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; antidiamatory; antibacterial; antivital; antifungal; antithematic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or prevancing or treating can be used to express ORFX proteins in gene therapy to each or and entering and nucleic acids can be used to express ORFX proteins in gene therapy or coctors. The proteins and nucleic acids may be used to treat cancers, or occors. The proteins and nucleic acids may be used to treat cancers, or occors. The proteins and nucleic acids may be used to treat cancers, or occors. The proteins and nucleic acids and ideasace, octaoparthritis, the presence of or predisposition to disease, occorationed immunodeficiency (SCID), AIDS, viral, altypertension, hypothyroidism, cholesterol ester storage, systemic lupus cythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, cocturnal haemoglobinuria, antinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.

These can be used for the prophylaxis, treatment, inhibition or retardation of a Cryptosporidium infection in humans or in animals such as calves. They can also be used for the detection and diagnosis of related infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anti-Cryptosporidium antibody - used to develop products for detection, diagnosis, prophylaxis or treatment of Cryptosporidium

```

The invention relates to the GP900 glycoprotein of the protozoan Cryptosporidium parvum, DNA encoding it, GP900 fragments, and fusion proteins comprising GP900 fragments. The invention also relates to the administration of GP900 refragments thereof to a host to elloit anti-capturation of GP900 or fragments thereof to a host to elloit anti-capture antibody production, and to a method of cryptosporidiosis treatment or prophylaxis comprising administration of anti-GP900 antibodies to an individual. Cryptosporidium parvum GP900 and GP900 fragments are able to competitively inhibit sporozoite or merozoite attachment or invasion, and are also useful for the generation of anti-GP900 antibodies. The antibodies also inhibit sporozoite or merozoite attachment/invasion and additionally inhibit the binding of GP900 injugands to GP900. GP900 proteins, fragments and antibodies may therefore be used to treat or cause of dlarrhoea in humans and causes life-threatening dlarrhoea in immunocompromised persons. Cryptosporidiosis can be contracted from contaminated municipal water supplies (e-g., public swimming pools). It is also a cause of dlasease in animals, resulting in financial losses in agriculture. GP900 fragments, fusion proteins and antibodies may also be used for the parasite in the environment. The present sequence Claim 2; Column 61-70; 59pp; English. Cryptosporidium parvum.
